# Welcome home, pup!

life with your new dog can be easier and more fun than you imagined!

With Oscar Winning Behavior's Amie Glasgow, CDBC, CSAT, IAABC-ADT, CCUI, FDM, FSG-I

YOU'LL HEAR 2 WEEKS, 3 WEEKS, 3 WONTHS...
WHATEVER.

THEY'RE ALL WRONG...

except the ones that

are right

### SUPERVISE WHEN YOU CAN, CONFINE WHEN YOU CAN'T, BE CONSISTENT ALWAYS

The only way they can learn the rules is if you're clear about what they are

#### FOR WALKS ANYMORE

"umbilical" method dragging the leash tab/traffic leashes

#### SET A GENEROUS SCHEDULE

Puppies can "hold it" 1 hour per month of age

"Alexa, remind me to take
Fuzzbutt out in two hours"

#### TIME OUTS

Provide enrichment and comfort and \*leave them alone\*

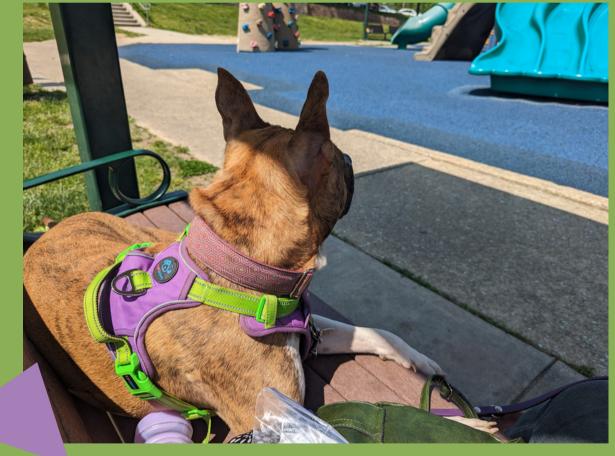

It's easier to bend rules than straighten them!

## what will \*your\* dog need to accept?

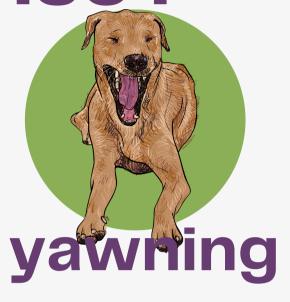

teach them these things are relaxing!

when they speak without words, does it make sense?

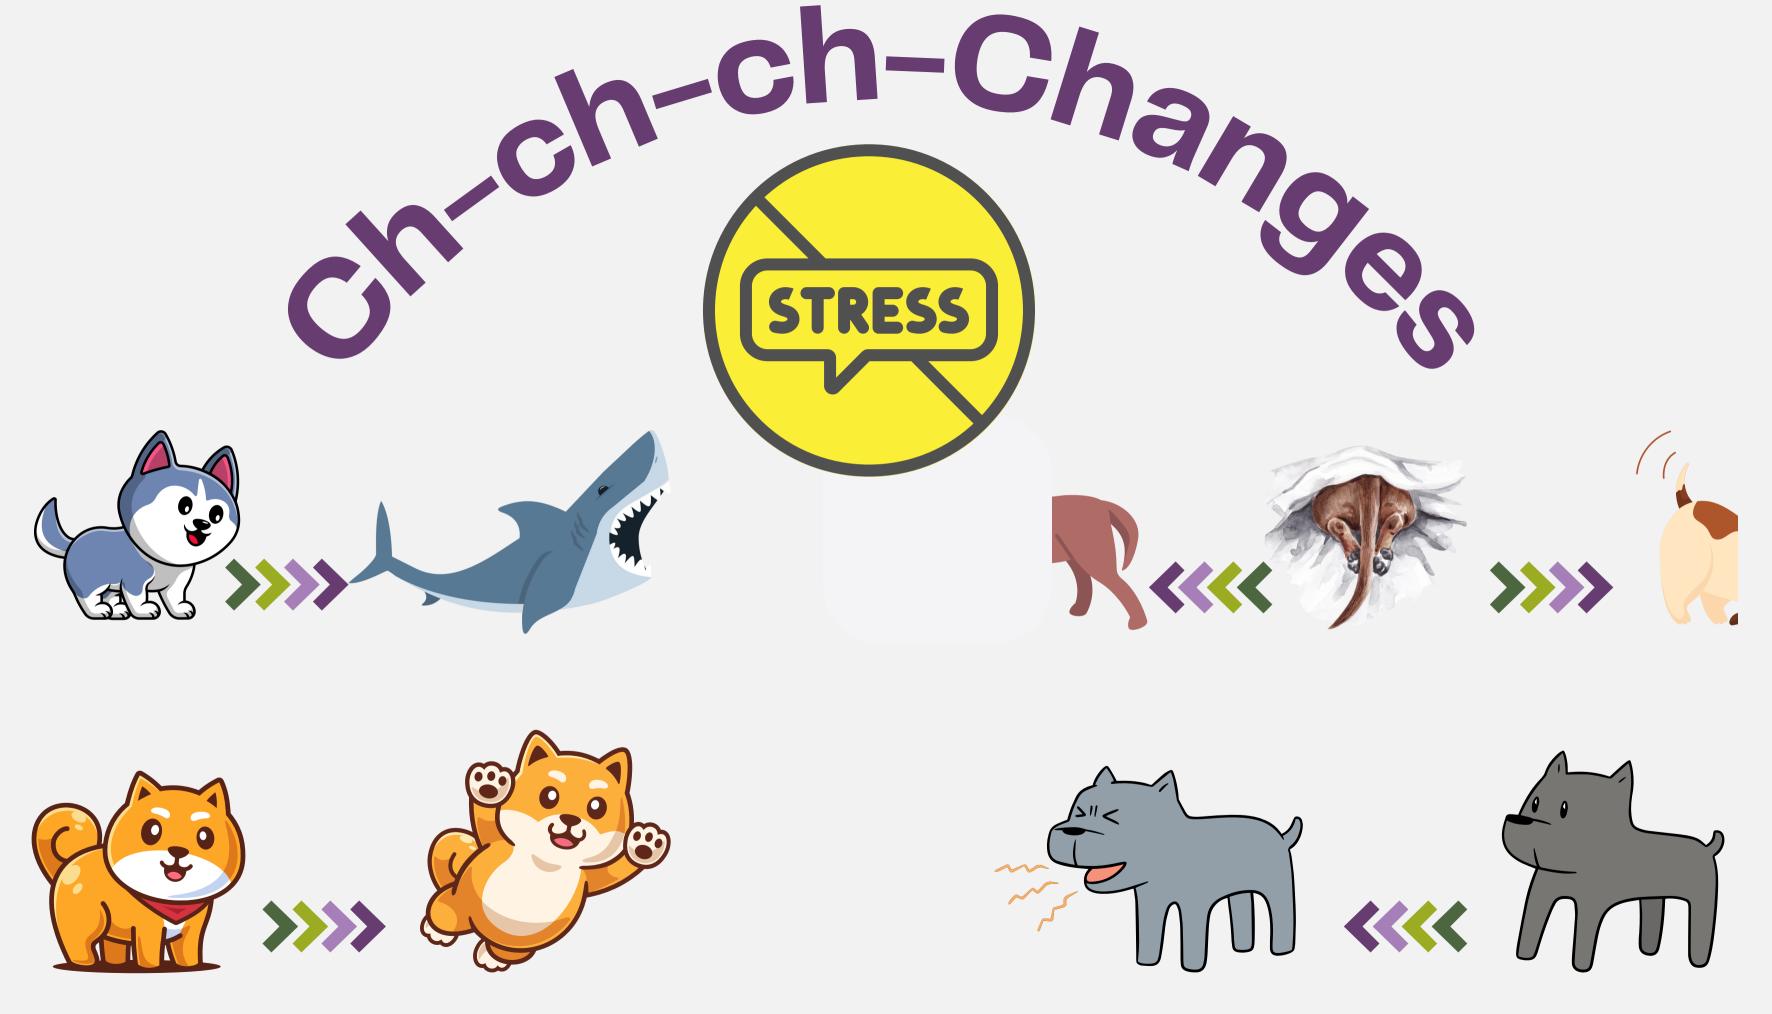

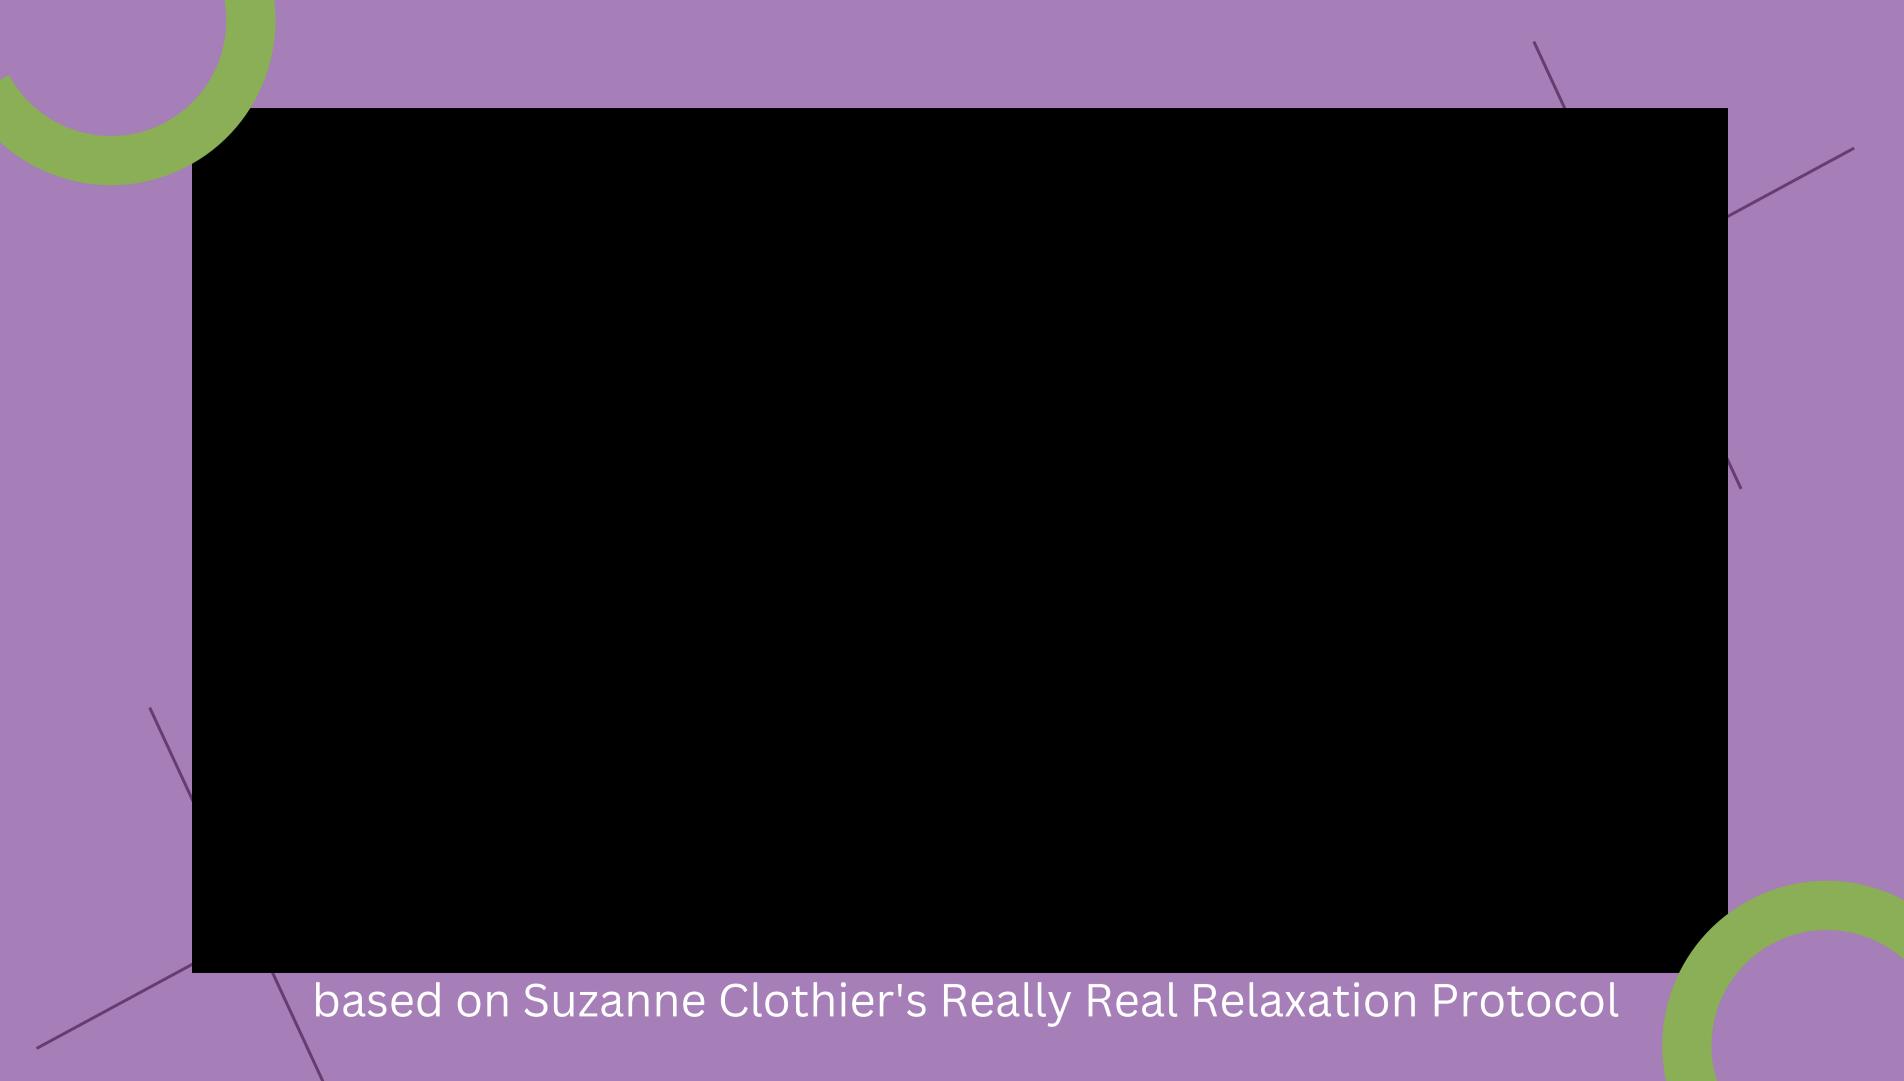

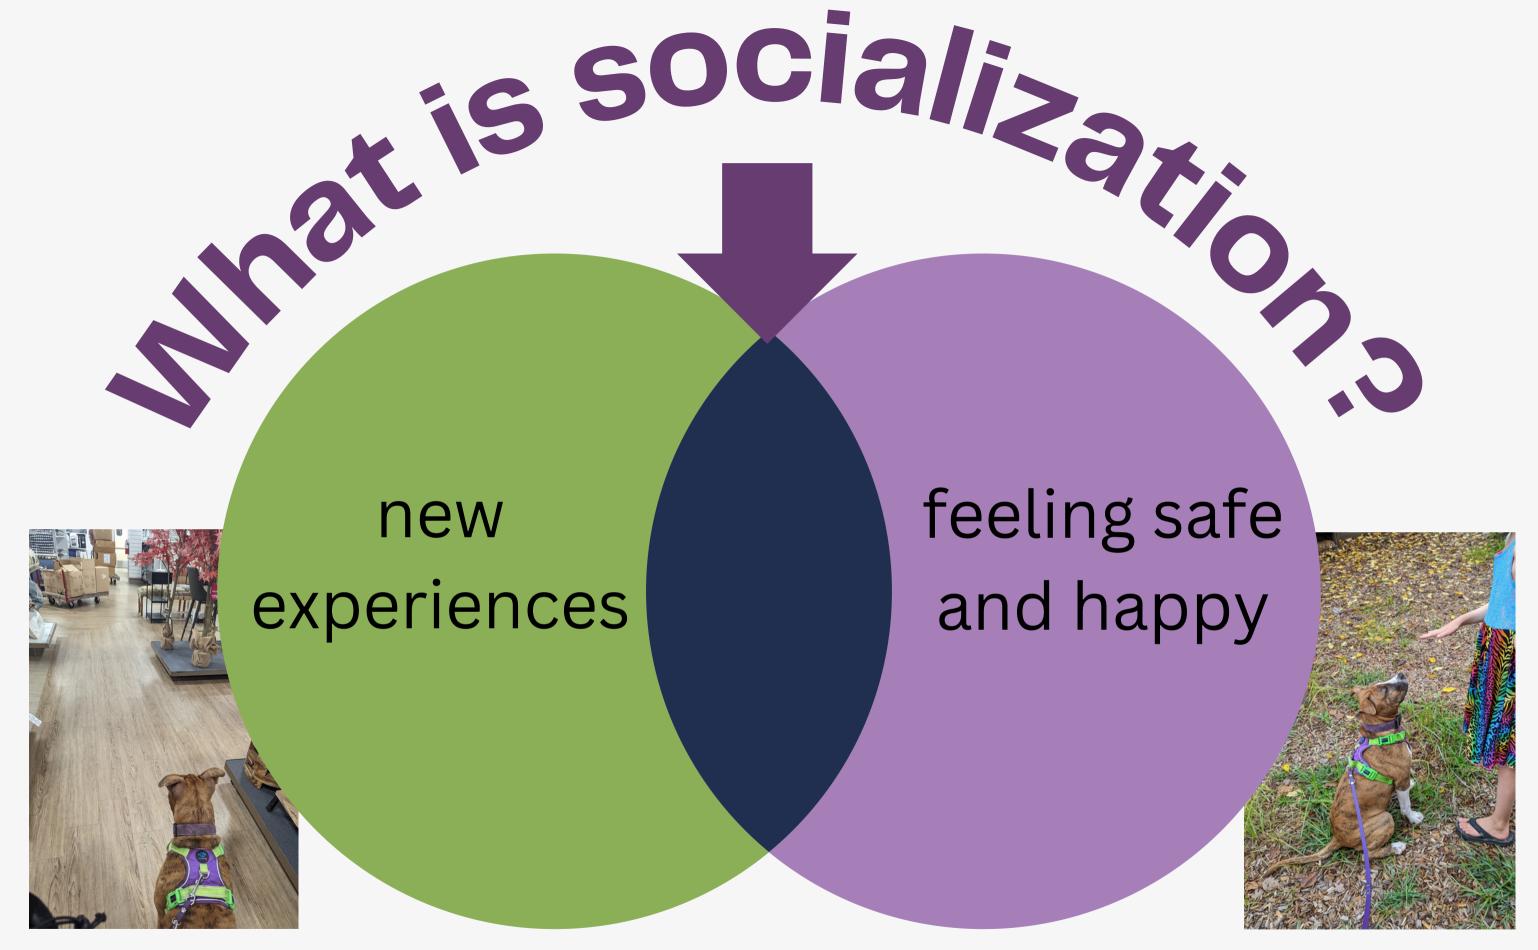

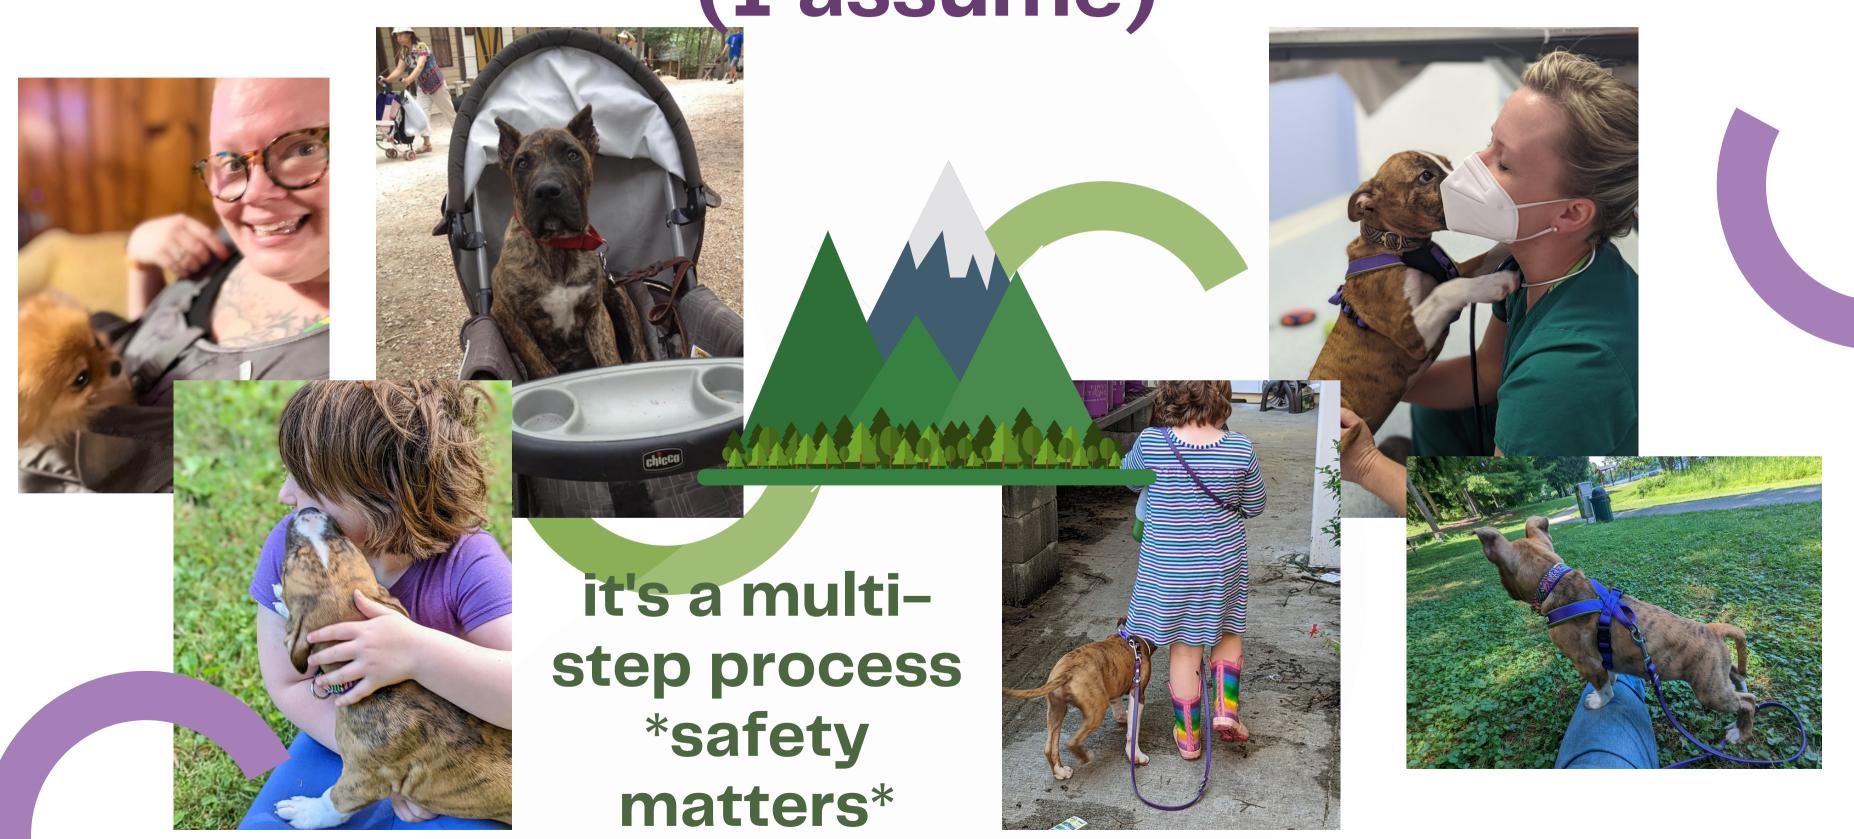

behavior out of the norm is also a sign of stress

\*it's more important that your pup feels safe than that they get close\*

socialization is like mountain climbing (I assume)

## socialization VS damage control

semantics? sort of

until the age of 16 weeks, you can teach a dog that new experiences are positive

after this age, you can try to convince them that new experiences aren't negative

the goal with multiple pets is....

### Puppy Licenses Expire!

- Most adult dogs will tolerate most behavior from most puppies under 4 months.
- Most adult humans will tolerate most behavior from most children under about age 4 years!

Arrange visual targets (such as bowls, plates, or other surfaces on which to place food)
When dog makes eye contact with you, step to next target and place food on it
Eye contact with you says "I want to play the bowl game, not fixate on the other animal"

a Pattern Game developed by Leslie McDevitt

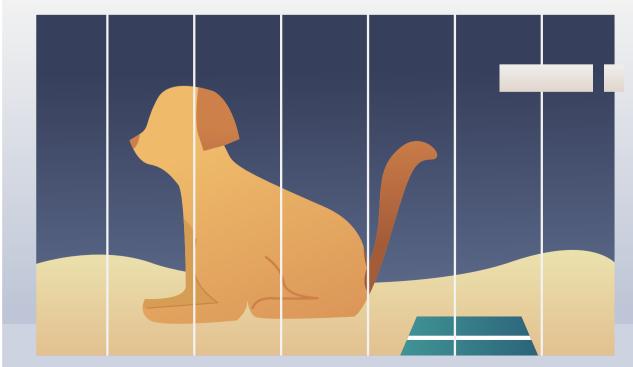

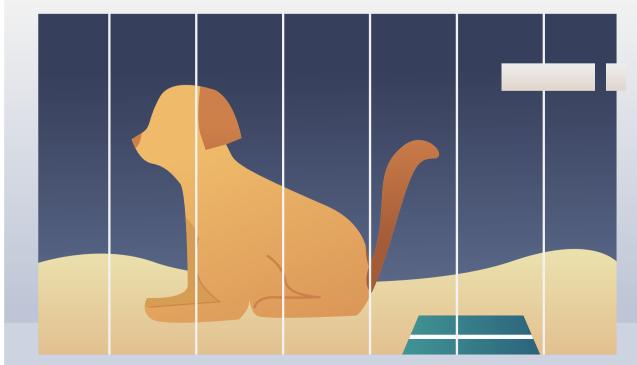

#### slow and steady

when in doubt - slow down

- You cannot go too slow
- You can go too fast
- Better to work with short, positive sessions than push things into bad feelings!
- Crates, baby gates, doors, and other comfortable confinement can save sanity and lives!
